

## **MW Boosters for commercial Cationic Polymerization Systems**

Essentially, drop in modifiers that boost the MW-T profile of existing commercial initiator systems. One such idea is currently under experimentation (in phase one) as part of an existing collaboration with another (famous) scientist; however, this area is open to interested third party funding agencies.

*Cost* = \$25-35k (Stage 1)

*Likelihood of Success* = 8

*Earning Potential* = 7

*Return on Investment* = 5 % royalty in return for IP rights.
