As usual the BS around Mr's place doesn't end. I took a few days off to help move various pieces of furniture & basically to get away from these dip-shits & it is the same old story. Now is the only one in here besides myself doing any lab work. Scott fortunately went through all the paper & supp. info I revised the injury at Mr's skull. He also tried to more or less try & say to me that I may not get to include my findings on suspension part of his (in my description) (which he doesn't realize but I am going to do so much work on this that there is no way I would be able to exclude it). These guys know that if it wasn't for me they'd never be able to do it in the 1st place — it most drive them nuts knowing that. And of course, nobody can know thank me for being the 1st person to draw TB no water — which I'm sure will try & steal the credit for. Neither of these guys has given me the slightest of help in making this work — well — Scott had been going on & on about how he was upshale with ultrasound & if I listened to him I would have never tried suspension.
